Update 1 : Impact of COVID-19 (Coronavirus) on above categories and events -

ARG along with other motorsport entities and more broadly sport in Australia is currently working with various agencies and stakeholders to fully quantify the impact of the most recent government communication as regards COVID-19 and "mass gatherings".

- The situation is evolving, and we are in constant communication with Motorsport Australia and other related parties to determine the best way forward from a safety and operational perspective.

- The main purpose of the government minimising mass gatherings is to reduce the risk of potential transmission of the COVID-19 virus to large groups as opposed to restricting sporting activity from occurring.

- We need to understand that this is a difficult period for everyone and that the sport has a large and loyal workforce. They along with their families are dependent on you turning up and racing to support them as we jointly work through the current challenges.

- Regional NSW has also faced a raft of challenges in recent months and our upcoming Bathurst 6 Hour at Easter provides both economic and other support to this region.

- There may well be some inconvenience that we all have to accept in the short term but the best way forward to support our sport and our people is **to continue to race whilst it remains safe and feasible to do so and based on current advice our next round at SMSP will occur as scheduled.**

- We are currently working on the assumption that for the foreseeable future that we will not permit the general public to attend events.

- **We are extremely well placed to work through this current situation with our free to air broadcasts across both Channel 7 and 7 Plus digital livestream. This ensures that we will still provide the safest, widest viewing access to all events for fans, supporters and sponsors.**

- A well-known adage adopted in many of the most difficult global events has been to "**Keep Calm and Carry on**" and currently that is the option that we are working to achieve with the relevant regulatory bodies.

We will provide further updates as soon as we have further information to share.

Regards

John McMellan
